

# Senior C# Developer

---

## Transport scheduling and resource planning software

**Location:** Leeds City Centre

**Type:** Permanent

**Salary:** Competitive basic and annual cash bonus plus stock options and benefits

A talented developer/consultant is sought to join a fast-growing, successful software and consulting company in Leeds which specialises in resource planning and performance modelling applications for the public transport industry.

### The Role

The role will see the successful candidate taking responsibility for developing and delivering products from requirements assessment and design through to testing, deployment and maintenance. The candidate will also be expected to use the software on behalf of clients on a consultancy basis, and to train clients and other users.

### The Candidate

The ideal candidate will have experience of coordinating small teams of developers, and a track record for delivering working products within agreed time and budget constraints. Successful candidates will have proven expertise in modelling complex problem domains, and will have a thorough understanding of object-oriented software design. Good knowledge of C# is desirable although experience with other object-oriented languages will also be considered.

The candidate should be interested in problem solving, and demonstrate careful attention to detail. Excellent communication skills are a prerequisite as the role involves working both with clients and in close-knit teams.

Candidates must hold a 2.1 or higher degree in a Computing, Science, Engineering or Mathematics discipline.

Applicants should submit a complete CV to the email address below together with a covering letter explaining how their experience and skills meet with our requirements.

**Strictly no agencies**
